There has always been interest in how animals live their lives it is easy for us to identify with them. But there are many remarkable stories about plants that deserve to be told. The Nature of Plants tells how plants adapt to the challenges of their habitats. Plants may live in places that provide too little rainfall, yet they thrive, either by evading drought, like the animals that live in deserts, or by tolerating the scarcity. There are plants that use other plants, climbing on them, strangling some, living in their leafy canopies, or parasitising them. And The Nature of Plants explores the love-hate relationships that plants have with animals, some feeding on plants but others drawn into serving plants by pollinating them, scattering their fruits and seeds, or being eaten themselves. The mostly hidden associations that plants have with bacteria and fungi are also revealed. Hard cover.
